## Castle defense 2 cool math games

With its touch controls, the iPad is a natural fit for strategy games. Here we round up the best of them. Whether you're a fan of turn-based or real-time strategy, tower defense or rogue simulations, you'll find something to love in any of these great iPad games. XCOM: Enemy Over may be the first computer or console game to get a full port on the iPad. This is great news for strategy fans who know XCOM as one of the most beloved games of the strategic decade. Sophisticated in turn-based tactics provide unparalleled depth of strategy, and the backdrop of alien invasion offers a haunting sci-fi experience. Enemy Over is an expanded version of the original game, Enemy Unknown. It covers everything from the original, as well as new themes and game elements. One of the most famous (and addictive) strategic games of all time, Civilization allows you to build a thriving empire that boldly times, history and nature alike. The sixth installment, Civilization VI, is the first to arrive on iOS and includes an almost identical version of the computer port. Players familiar with previous editions of the game know what to expect: expanding, empire-building, in turn based on monstrousness, from which it is difficult to turn away. However, it can be difficult for first-timers to navigate the complexity. Civilization VI comes with a magnificent price tag, which is understandable given the similarity to the computer version. But you can demo the game up to 60 turns for free. Inspired by Star Trek, FTL: Faster than light is an unfair game, which means that there is a procedurally created degree of chance for every new game. With so many different ways to play the game, you will find yourself tiring hours for your starship team. If you've ever wanted to know what it feels like to command a redshirt, knowing full well what a redshirt means, it's a game for you. First released in 2004, Rome: Total War beautifully blends its turn-based and real-time strategy with tactical control, both battles and military campaigns. Rome: Total War is one of many classics to enjoy the revival of iOS, losing none of the magic that made it such a great strategy game to begin with. Bundles include classical Rome: Total War, Barbarian invasion and Alexander variants. Each can also be purchased separately. The Civilization Revolution is an attempt to bring the CIV franchise back to its roots, simplifying an otherwise huge game into something casual and hard strategy players. The Civilization Revolution has the same epic feel as PC games, with hours of content, but a simpler package. The sequel, Civilization Revolution 2, expands this idea with new technologies to discover and units deployed. There is also a new way to play: scenarios that drop you right to smack in the middle of simulated historical events. There is no doubt that Civilization VI is an ideal, super-sized version, but it also has a super-sized price tag. If we are not Civilization Games, Civilization Revolution 2 is a great way to get your feet wet before jumping into a more complex civilization VI. Plants vs Zombies was a refreshing take on the tower defense strategy game, and the sequel remains true to its roots. This is perfect for players who enjoy addictive strategy games without the need to spend hours in one session. Levels get more intense as you go along, and you will be able to play through various topics such as the Wild West and Ancient Egypt. This is one of those rare occasions where if you've never played the original Plants vs Zombies, the sequel is the best place to start. It's a free-to-play model that can still ads and in-app shopping in other games. The original is great, but you still have a ton of fun if you decide to play through the sequel first. Hard to pronounce, but easy to get addicted to, Rymdkapsel is perhaps the most unique game on this list. The goal is to build a space station capable of protecting against alien attacks by studying some strange monoliths. Some people may be turned off minimalist visually, but these images nonetheless cause an enchanting atmosphere. In many ways, Rymdkapsel resembles the old Dungeon Keeper games, where you build dungeons with different rooms and prepare minions to protect yourself from invaders. It's a pity that the dungeon keeper remake was too heavy with in-app purchases, but for players who like that combination of real-time strategy and tower defense, Rymdkapsel is an interesting load. Designed for fans of space away sci-fi, Star Command allows you to command a spaceship tasked with defending the planet on Earth. You have strategic control over operations and ship resources and can deploy redshirts to defend the ship. In addition to redshirts, there are yellow shirts that serve as engineers and blue shirts that are scientific officials. Retro graphics and frivolous take on the genre add fun experience. As you keep the ship, you will encounter enemies with radius to your ship. The only drawback in the game is the linear storyline, which allows you to play through the second time a little repetitive. Perhaps the best tower defense game on the iPad, TowerMadness tasks you with a critical mission to defend sheep from alien invasion. In your arsenal there is a tower that electro-jumps aliens to run slower, a strengthening tower that improves the surrounding towers, and an artillery tower that bombs enemies. TowerMadness features a free form tower defense game and a great tutorial that will prompt you into the game without completely boring long-time tower defense nuts. For those who like a little role playing their strategy games, Battleheart puts you on the team a lone knight capable of recruiting more mercenaries as the game progresses. Intuitive swipe controls allow you to control the action on the screen, allowing you to create a unique RPG and real-time Experience. Modern conflict has an intuitive one-touch control scheme that allows you to send tank and helicopter battalions against enemy bases without sweat. This is a nice solution to some of the navigational problems faced by other real-time strategy games. We just want the game to have fewer paywalls and commercials. Great Little War Game has some familiar real-time strategy elements, but in turn based on the system. You go around collecting gold and building soldiers, as it would do in real time game, but you need a complex strategy and planning that is more familiar with turn-based games. Cartoon graphics add to the fun and as you progress you unlock new strategy levels. Each scenario has its own goals, but most of the time you are blasting enemies into smithereens. While this is not the best strategy game on the iPad, there is something to be said at the risk of the classic game. It's a great game for those who remember sitting around the table, moving army units around the board, and hoping that your strategy to take over Australia will take you to Asia and the rest of the world. The graphics are great and the game really resembles its classical origin. Thank you for informing us! Tell me why! These fun math games for children will strengthen the basic arithmetic concepts and lead to love of learning. When you need to teach math, you've probably tried everything from quizzes at breakfast to additional homework help. However, modern technologies have introduced a clever new method of designing skills: digital math games for children. We have selected eight favorite math programs for students of all ages to teach arithmetic operations, such as supplementation, subtraction, multiplication and division. Some even meet the general basic state standards. And the best part is that your child will have so much pleasure, she hardly even know she is learning! RELATED: The best educational programs for children in this math game for children, a monster named Maxx will teach your student basic arithmetic, including supplementation, subtraction, multiplication and division. Your child will learn many skills at once while helping Maxx fight enemies, explore, and save his friend Dextra. You can even enter multiplayer mode and compete with others online! (Classes 1 to 3; Free, App Store and Google Play). Making a call to all visual learners! This math program aims to make arithmetic fun and engage in self-paced, curriculum-compatible program. For example, at kindergarten level there are shapes and calculations, and at the fifth grade level the focus is on multiplication, division, basic algebra, fractions, and decimal numbers. The app also has several outstanding features: virtual rewards, progress dashboards, and explanations for incorrect answers. degree of degree; Free, App Store and Google Play). Solve various math problems by collecting numbers and bonuses while browsing the marble maze. With three difficulty levels and 16 marble styles, this math program can be personalized to suit your child's child skills. It also allows you to customize games to focus on areas where your child needs the most help. DOLLARS (\$3.99; App Store) RELATED: Back to School Tips for Parents: A degree-by-degree guide for the kids in this math app, the main task is to pass all eight levels over time by answering 10 math questions in each level (including those about fractions and more than/below numbers). Each question allows for a limited response time. Players are rewarded with an additional four seconds for the correct answers, and they lose five seconds for the wrong answers. A dynamically generated survey means that children get new questions every time they play. (Free; Google Play) Adorable graphics in the math tree will surely keep the kids involved! Your student will learn basic math skills as they add/take away owls, plums, peaches, blue birds and more from the tree. Just tap and move the items to keep things going! (Class PreK and Kindergarten; \$0.99, App Store). Developed by stanford high school experts, this program will teach your child math through charming animal characters. But it also has programs dedicated to reading, writing, language, problem solving, engine development, and social emotional development. Adaptive features allow you to use your personal life to ensure that children get the full part of the digital game. (Age 2-6; Free, App Store and Google Play). RELATED: First Grade Math Prep: 6 Skills Your Child Will Learn Looking For Free Math Games for First Graders and Daycare? This fun program from the creators of Khan Academy Kids can be a trick! It takes children a mathematical adventure based on common basic state standards. Children earn rewards for completing five multilevel activities that they can put into the creation of their city. Parents can also track progress using the report card. (Age 3-7; Free, App Store and Google Play) With this fun math game, young kids will have fun, read numbers interactively, track them and read them. Don't let the name deceive you: the program also includes maths for children in elementary school – up to grade 3 level. (2 to 8 years; Free, Google Play) RELATED: 3 math games for kids who don't need a screen screen
